REASONS FOR ALLOWANCE

Claims 1 and 4-8 are allowed.

1. The following is an examiner's statement of reasons for allowance: Prior art fails to teach or fairly suggest a carrier for movement of test sample devices through an automated sample testing instrument, the carrier having N receiving structures for receiving N test sample devices and N vessel receiving structures for receiving N vessels containing a fluid test sample, where N is an integer greater than one, each receiving structure for receiving a test sample device, the improvement comprises providing N optical interrupt positioning features formed in the carrier, each of the positioning features placed in registry with one of the receiving structures, whereby detection of one of the positioning features by a fixed optical interrupt sensor in the sample testing instrument detects a position of a test sample device placed in the receiving structure corresponding to the positioning feature. The carrier is moved through the instrument in a direction along a path of movement having a longitudinal axis, the test sample devices are oriented in the carrier in a direction orthogonal to the longitudinal axis, and wherein the positioning features are arranged on the carrier in a direction parallel to the direction of movement of the carrier in the instrument. The carrier further comprises an upper surface and a lower surface and first and second side regions, and wherein the positioning features comprise voids formed in a rib projecting from the lower surface, the rib placed between the first and second side regions. The fixed optical interrupt sensor is positioned in the instrument along the path of movement of the carrier wherein the rib passes over the optical interrupt sensor.
